FACTORISER AVEC UNE IDENTITE REMARQUABLE

Exercice 1 : Retrouver l'expression dont on connaît le carré :

$4x^2 = (2x)^2$	$9x^2 = (\dots\dots\dots)^2$	$49x^2 = (\dots\dots\dots)^2$
$36x^2 = (\dots\dots\dots)^2$	$81x^2 = (\dots\dots\dots)^2$	$25x^2 = (\dots\dots\dots)^2$

Exercice 2 : Factoriser en utilisant l'identité remarquable $a^2 + 2ab + b^2 = (a + b)^2$

$$A = x^2 + 10x + 25 = (\dots\dots\dots)^2 + 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

$$B = x^2 + 6x + 9 = (\dots\dots\dots)^2 + 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

$$C = 4x^2 + 12x + 9 = (\dots\dots\dots)^2 + 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

$$D = 36x^2 + 84x + 49 = (\dots\dots\dots)^2 + 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

Exercice 3 : Factoriser en utilisant l'identité remarquable $a^2 - 2ab + b^2 = (a - b)^2$

$$A = x^2 - 2x + 1 = (\dots\dots\dots)^2 - 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

$$B = 9x^2 - 18x + 9 = (\dots\dots\dots)^2 - 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

$$C = 49x^2 - 56x + 16 = (\dots\dots\dots)^2 - 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

$$D = 4x^2 - 40x + 100 = (\dots\dots\dots)^2 - 2 \times \dots \times \dots + (\dots\dots\dots)^2 = (\dots\dots\dots)^2$$

Exercice 4 : Factoriser en utilisant l'identité remarquable $a^2 - b^2 = (a + b)(a - b)$

$$A = x^2 - 25 = (\dots\dots\dots)^2 - (\dots\dots\dots)^2 = (\dots\dots\dots)(\dots\dots\dots)$$

$$B = x^2 - 64 = (\dots\dots\dots)^2 - (\dots\dots\dots)^2 = (\dots\dots\dots)(\dots\dots\dots)$$

$$C = 25x^2 - 9 = (\dots\dots\dots)^2 - (\dots\dots\dots)^2 = (\dots\dots\dots)(\dots\dots\dots)$$

$$D = 49 - 16x^2 = (\dots\dots\dots)^2 - (\dots\dots\dots)^2 = (\dots\dots\dots)(\dots\dots\dots)$$

Exercice 5 : Factoriser en utilisant l'identité remarquable $a^2 - b^2 = (a + b)(a - b)$

$$A = (x + 1)^2 - 25 = (\dots\dots\dots)^2 - (\dots\dots\dots)^2 = [(\dots\dots\dots) + \dots] [(\dots\dots\dots) - \dots]$$

$$B = (2x - 1)^2 - (x + 5)^2 = [(\dots\dots\dots) + (\dots\dots\dots)] [(\dots\dots\dots) - (\dots\dots\dots)]$$
